Build a python code. Assume u get temperature and humidity values(generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

program: import

random

```
temp=random.randint(0,100)
```

```
humid=random.randint(0,100)
```

```
print( " Note:")
```

```
print (" Normal Temperature Level is 50°C")
```

```
print (" Normal Humidity Level is 50%")
```

```
print ( ) if(temp>=
```

```
print ("Temperature is High",temp,"°
```

```
else:
```

```
print ("Temperature is Normal",temp,"°C
```

```
if (humid>=50):
```

```
print ("Humidity is High",hu
```

```
else:
```

```
print ("Humidity is Normal",humid,"%")
```
